

# Suggestions for Human Freedom Index

- Country Profiles are perfect candidates to build a dashboard around, on a different/2nd tab
  - e.g. “Which direction is my country X is going regarding personal / economic freedoms?” → **should be much easier to answer**
  - in its current form in order to see how the situation evolved in US, I have to download the country profiles pdf., and scroll all the way down & it only shows the combined h.f. index
- The resource has data from 5 years & will continue to grow:
  - Maybe, instead of listing the all the data by year, we can merge them into 1 visualization
  - By default, show the most recent data & let the user choose the year for earlier years
  - Include worldwide/region-wide trend charts over the years in the main dashboard
  - Include country trend charts over the years in the country profiles section
    - e.g. how did p.f. (not just the combined index) in country X evolve over the past 5 years

# Suggestions for Human Freedom Index

- URL
  - passing parameters via URL for wider dissemination
    - <https://www.cato.org/human-freedom-index/country-profile?country=USA&index=personal>
- Shortening URLs
